

Midwest Engineering

Associates, Inc.

Structural Engineering Services

Midwest Engineering Associates, Inc.'s goal is to assist our clients in providing safe and cost effective solutions for their project needs. Our staff values providing outstanding service by working with our clients to determine their needs and to develop a solution to satisfy the needs and conditions of each specific project. Our Structural Engineering Group has extensive experience with the design of many different types of structures using all of the most commonly used structural materials, including: concrete, steel, aluminum, masonry and wood.

Midwest Engineering Associates, Inc. has the ability to provide Structural Engineering services on a wide range of projects, both in type of structure and in scope of work. We offer quality structural services for all phases of projects, from the initial planning stages through design and contract document preparation, and construction observation services. Projects may include: new construction, structure expansion, rehabilitation or repairs to existing structures, and many other services.
